CLEANLEACH

TREATMENT OF NURSERY LEACHATES BY COMBINING SLOW
SAND FILTRATION AND HORIZONTAL SUBSURFACE-FLOW
CONSTRUCTED WETLANDS

NEWSLETTER APRIL 2014

The CLEANLEACH solution consists of a system for recovering and treating leachates based on the combination of slow sand filtering in situ (under the container area) and constructed wetlands.

This solution will be spread by means of the CLEANLEACH project and will be developed over the next two years by the research institute [IRTA](#), and three SME operating in the European Union: [Buresinnova](#), [Naturalea](#) and [Salix](#).

Construction of a market-scale replication begins

Naturalea installs the first Cleanleach plant in Sala Graupera nursery, a Spain based company dedicated to quality, innovation and the growing of adequate species for Eco-gardening.

CLEANLEACH at a wetland seminar

IRTA researches and partners of the CLEANLEACH project explain scientific, technical and commercial aims of the leachate treatment system. Presentations available [here](#).
